

A healthier way to sit

Steelcase partnered with experts in biomechanics and ergonomic research to understand how a chair should support the body. That research became the basis for Leap's design and unique, patent protected features.

- ■ Its back moves as your back moves. Leap's LiveBack™ technology mimics and supports the natural motion of your spine
- ■ Its arms move as your arms move, providing proper support for your wrists, arms, forearms and shoulders
- ■ As you recline, Leap's Natural Glide™ system moves with you enabling you to see and reach your work with ease and comfort
- ■ Leap's adjustments are there to provide a custom fit whether you're tall, small or in between
- ■ Leap is up to 98% recyclable and made of up to 30% recycled content; it has received Silver Cradle to Cradle™ product certification and it is level™ 2 certified to the BIFMA e3 sustainability standard

This chair's just for you

This chair was designed to conform to the one of a kind shape of your spine, yet adjusts to fit a variety of shapes and sizes, so every Leap chair is as unique as the person who sits in it.
